RESULTS THAT WILL WORK FOR YOU!

Aqua Hawk MB-WW

This powder product contains a broad spectrum of microorganisms, micronutrients and bio-stimulants selected to break down the organic material such as: fats, oils, grease, starches, proteins and other substrates that can accumulate in sludge tanks, ponds and thickeners.

Item #: 54346

Packaging: 22 LB PA

Aqua Hawk MB-SR

This liquid product contains a broad spectrum of microorganisms, micronutrients and bio-stimulants selected to break down the organic material such as: fats, oils, grease, starches, proteins and other substrates that can accumulate in sludge tanks, ponds and thickeners.

Item #: 54454, 54450

Packaging: 40 LB PA, 450 LB DR

Reduce Your *Sludge* Removal Costs

Sludge Tank and Lagoon Treatment Program

Hawkins Water Treatment Group

Customer.service@hawkinsinc.com
www.hawkinsinc.com

SLUDGE is a costly by-product of all wastewater treatment facilities. For facilities equipped with sludge holding tanks, ponds or lagoons, we provide a solution to alleviate the challenges associated with their operation.

Common Challenges

DISPOSAL COSTS

Whether hauling pressed or liquid sludge to landfill or land application, sludge disposal is a significant cost to you.

ODOR & H2S

Complaints from the community, corrosion and operator safety are prevalent issues with sludge pressing and sludge tanks due to H2S and odorous compounds released during transfer/pressing.

POOR DEWATERING

Poor separation of water and solids during decanting and pressing leads to increase polymer usage, labor, and hauling costs.

LIMITED CAPACITY

Poor dewatering, digestion and excess loading of sludge leads to a bottleneck for the WWTP in sludge handling.

AQUA HAWK SLUDGE TREATMENT PROGRAM WILL REDUCE YOUR SLUDGE REMOVAL COSTS!

Product and service combined in a low cost, high reward program

Valuable Solutions

LOWER DISPOSAL COSTS

Improved digestion and dewatering means less sludge to handle, haul and dispose of.

IMPROVED DEWATERING

Enhanced digestion produces more consistent sludge, improving dewatering while reducing polymer usage and labor.

REDUCED ODOR & H2S

Through improved digestion our program inhibits production of odorous compounds and H2S. Reducing complaints, safety issues and corrosion.

INCREASED CAPACITY

The improvements in digestion and dewatering results in increased operational capacity of the sludge tank/pond system.

PROGRAM APPROACH

1. Our Service Reps perform a complete system survey.
2. We provide training and support for operators on where, when and how to apply product.
3. We ensure that SUCCESS is measured and documented.
