

EQUIPMENT

- Full line of new chemical injection pumps
- Assorted plumbing parts for installation
- Various new chemical metering and measurement units and sight-glasses
- Assorted sizes of bulk chemical storage tanks
- Control and monitoring systems
- Safety equipment
- Testing equipment
- Spill containment systems
- Chlorination control systems
- Mixers
- Calibration chambers
- Chemical feed equipment
- Pool controllers

Why Phosphorus Removal?

Eutrophication: The process by which a body of water acquires a high concentration of nutrients, especially phosphates and nitrates. These typically promote excessive growth of algae.

As the algae die and decompose, high levels of organic matter and the decomposing organisms deplete the water of available oxygen, causing the death of other organisms, such as fish.

Delivering the chemicals, equipment and the quality service you're looking for.

Phosphorus Removal

Let Hawkins Water Treatment Group come out and jar test for phosphorus removal.

Upon completion of the testing we will give you a detailed document of our testing and the results.

Even if you have a good phosphorus removal program currently, let us see if we can give you a better result or financial option.

We have the ability to custom blend a product that will give you the best results.

In addition, Hawkins will have someone on-site to assist with setting up a trial or to help with other water quality issues such as: BOD, COD, NH4, TSS and Settling.

Steps for phosphorus removal:

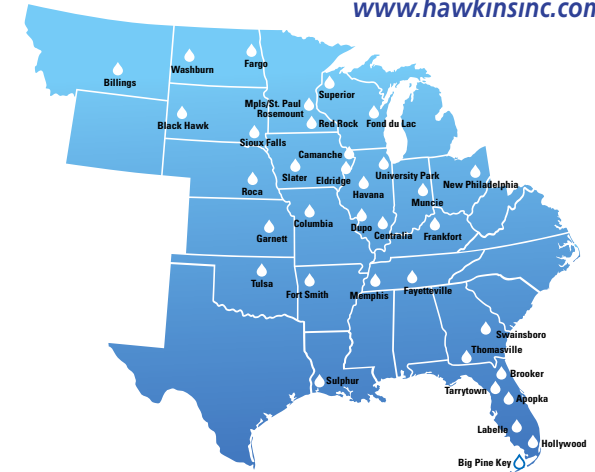

1. Test your water
2. Determine the phosphorus level
3. Recommend and review treatment options
4. Apply treatment
5. Monitor water

Phosphorus removal improves water quality
