

**Are clogged lift stations
stinking up your day?**

**Start saving time and
money with Hawkins**

Products scientifically selected for
results that will work for you!

Our Products

Hawkins can specify and supply effective
liquid and **powder** products for your lift
stations.

These scientifically selected products
contain a broad spectrum of microorganisms,
micronutrients and bio-stimulants selected
to break down the organic material such as:
fats, oils, grease, starches, proteins and other
substrates that can accumulate in lift stations.

Let Hawkins help you

Hawkins has years of experience and the
expertise to develop custom water treatment
solutions. We can provide you with broad and
unique offerings across multiple product lines.

Our mission is to help our customers research
and develop tailored solutions for their unique
environment to ensure their success.

Hawkins Lift Station Treatment program will keep your lift stations running smoothly.

(Without just pushing the issues downstream)

Proven to save facilities time and money in the fight against lift station challenges.

Our Program Approach

1. Our Service Reps perform a complete system survey.
2. We provide training and support for operators on where, when and how to apply product.
3. We ensure that SUCCESS is measured and documented.

LIFT STATION CHALLENGES

Expensive Pumping, Jetting & Clean-Outs

Solids, Fats, Oils & Grease (FOG) can build up in lift stations and sewer lines which require physical removal from the system at a high cost.

Corrosion & Equipment Failure

Solids and FOG buildup can cause failure of equipment. Additionally, they lead to production of H₂S and biological acids that severely corrode mechanical and electrical components.

Odor Complaints

Complaints from the community, and operator safety are prevalent issues in lift stations and force mains due to the formation of H₂S and biological acids.

Costly Chemical Treatment

Common chemical treatments for odors, H₂S and FOG are costly and require specialized equipment and labor to manage. Most importantly, chemicals don't address the issues – they just push them downstream.

HAWKINS' TREATMENT RESULTS

Reduced Pumping, Jetting & Clean-Out Costs

Hawkins' biological treatment will digest solids and FOG, preventing them from becoming problem-causing buildups.

Greatly Reduced Equipment Corrosion & Failure

Digestion of solids, FOG and organic acids while stopping H₂S formation. It also eliminates costs associated with corrosion and equipment failure.

Improved Safety and Fewer Odor Complaints

Digestion of organic acids and prevention of H₂S results in improved human safety and less discomfort to the community.

Reduced Chemical Treatment Costs

Supplying a solution that prevents challenges at the source before they form, resulting in reduced labor and no capital investment.
