

**Is a buildup of sludge
clogging up your day?**

**Start
saving
time and
money
with
Hawkins**

Products scientifically selected
for results that will work for you!

Our Products

Hawkins can specify and supply effective
liquid and **powder** products for your sludge
tanks and ponds.

These scientifically selected products
contain a broad spectrum of microorganisms,
micronutrients and bio-stimulants selected
to break down the organic material such as:
fats, oils, grease, starches, proteins and other
substrates that can accumulate in your tanks
and ponds.

Let Hawkins help you

Hawkins has years of experience and the
expertise to develop custom water treatment
solutions. We can provide you with broad and
unique offerings across multiple product lines.

Our mission is to help our customers research
and develop tailored solutions for their unique
environment to ensure their success.

SLUDGE TANK AND LAGOON TREATMENT PROGRAM

***Celebrating over 80 years
of serving our customers***

www.hawkinsinc.com
800.328.5460 • email: wtg@hawkinsinc.com

Sludge is a costly by-product of all wastewater treatment facilities. For facilities equipped with sludge holding tanks, ponds or lagoons, we provide a solution to alleviate the challenges associated with their operation.

Proven to reduce your sludge removal costs.

Our Program Approach

1. Our Service Reps perform a complete system survey.
2. We provide training and support for operators on where, when and how to apply product.
3. We ensure that SUCCESS is measured and documented.

SLUDGE CHALLENGES

Disposal Costs

Whether hauling pressed or liquid sludge to landfill or land application, sludge disposal is a significant cost to you.

Odor and H₂S

Complaints from the community, corrosion and operator safety are prevalent issues with sludge pressing and sludge tanks due to H₂S and odorous compounds released during transfer/pressing.

Poor Dewatering

Poor separation of water and solids during decanting and pressing leads to increased polymer usage, labor, and hauling costs.

Limited Capacity

Poor dewatering, digestion and excess loading of sludge leads to a bottleneck for the WWTP in sludge handling.

HAWKINS' TREATMENT RESULTS

Lower Disposal Costs

Improved digestion and dewatering means less sludge to handle, haul and dispose of.

Reduced Odor & H₂S

Through improved digestion, our program inhibits production of odorous compounds and H₂S. Reducing complaints, safety issues and corrosion.

Improved Dewatering

Enhanced digestion produces more consistent sludge, improving dewatering while reducing polymer usage and labor.

Increased Capacity

The improvements in digestion and dewatering results in increased operational capacity of the sludge tank/pond system.
