The Leading Cause of Sewer Blockages:

Fats, oils and grease (FOG) build up is the leading cause of sewer blockages in the United States. These blockages can lead to backups into residential and commercial properties.

Effective FOG management in collection systems has many benefits downstream to the plant and to city staff. Fewer callouts, less manual cleaning, and more effective treatment of wastewater at the plant.

Automated dosing
makes lift station
treatments
simple

Hawkins Total System Approach:

- ✓ Identify the source of the problem
- ✓ Design a plan tailored to your specific needs

Hawkins' Products:

- ✓ Bacterial blocks
- ✓ Liquid bacteria
- ✓ Dry bacteria
- ✓ Jetting supplements
- ✓ Floating degreaser
- ✓ Liquid solvents
- ...and much more

Treatment for FATS, OILS and GREASE (FOG) Buildup

The Problem: FOG buildup causes lift station problems, narrowing or blockage of sewer lines, noxious odors, and even foaming at the plant. This can lead to higher and higher maintenance and operational costs.

The Solution: Hawkins' total system approach will tailor a treatment plan for your unique needs.

The Benefits:

- ✓ Increase efficiency and performance of collection systems
- ✓ Reduce the accumulation of FOG deposits
- ✓ Extend the life of lift station pumps
- ✓ Reduce sludge build-up & improve settling
- ✓ Significantly reduce odor problems and complaints associated with VFA's
